

Mudborne

1612.

An Almanacke and Prog-  
noscification for this pre-  
sent yeare of grace

*pp. 246 1612 248*

Being Leape yeare.

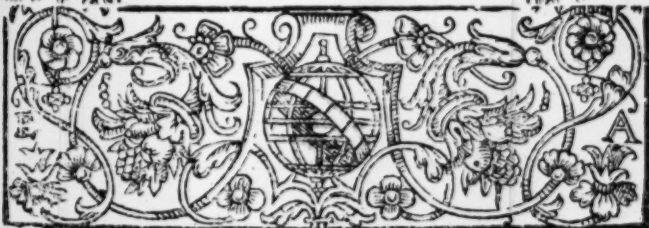

Merited appropriately for  
the parralell of our Cantabridgian  
climate, but like to be differently serving  
for this whole Monarchie of  
great Brittain.

Sub latitude — 52 — 20

Sub longitude — 21 — 1  
3

The Characters of the seauen Planets, twelue  
signes and the aspects of Coniunction, Sex-  
tile, Quadrate, Trine, and Opposition, be thus  
figured, as followeth.

The seauen planets.

♄ ♀ ♂ ☉ ♀ ☿ ☾  
Saturne, Iupiter, Mars, Sol, Venus, Mercury, Luna.

The twelue signes.

♈ ♉ ♊ ♋ ♌ ♍ ♎ ♏  
Aries, Taurus, Gemini, Cancer, Leo, Virgo, Libra, Scorpio,  
♐ ♑ ♒ ♓  
Sagittarius, Capricorne, Aquarius, Pisces.

The markes of the Aspects

♌ \* ☐ △ ♎  
Coniunction, Sextile, Quadrant, Trine, Opposition.

**The Anatomie of mans body, and the gouern-  
ment of the members thereof by the Moone accor-  
ding to her court in the 12. signes  
of the Zodiacke.**

**Taurus**  
Necke &  
thronte  
**Cancer**  
Brest, &  
macke &  
lungs.  
**Virgo**  
Guts &  
belly.  
**Scorpio**  
secrets &  
bladder.  
**Capricornus**  
the  
knees.

**Aries The head and face**

**Gemini**  
Armes &  
Shoulders  
**Leo**  
heart &  
backe.

**Libra**  
Reines  
& loynes  
**Sagittarius**  
thighes

**Aquarius**  
the legs

**Pisces The feet**

**The Signes Regiment.**

Aries head, Taurus neck, Gemini armes require,  
Cancer brest, Leo heart, Virgo guts desire:  
Libra loynes, Sco. pio secrets, Sagittarius thighes  
Capricornus knees, Aquarius legs, & Pisces feet supplies.

**The Planets Regiment.**

Saturne hath right eare, bones, spleene and the bladder,  
Iupiter lungs, ribs, the gristlells and liner:  
Mars gouerneth left eare, gall raines, and the baines,  
Sol sinewes, heart, right eye, and right side obtaines.  
Venus rules throat, paps, sperue, loynes, and p'suities,  
Mercury memory, vaine and phantasies,  
As also the month, tongue, hands, fingers, and thighes,  
Luna holds wombe, talk, brest, stomacke, and eyes.

January hath xxxi. dayes

Now ist a time vntmeete to bleede,  
yet bathes with counsell thou maist vse:  
ow white wines take, on warme meats feede,  
vse not much sleepe, sweet drinckes refuse.

The Natures, beginnings, and endings of  
the foure Quarters of the yeere, called  
Winter, Spring, Sommer and Haruest :  
with a particular discription of the  
Weather like to happen in each of  
them for this yeere 1612.

### And first of Winter.

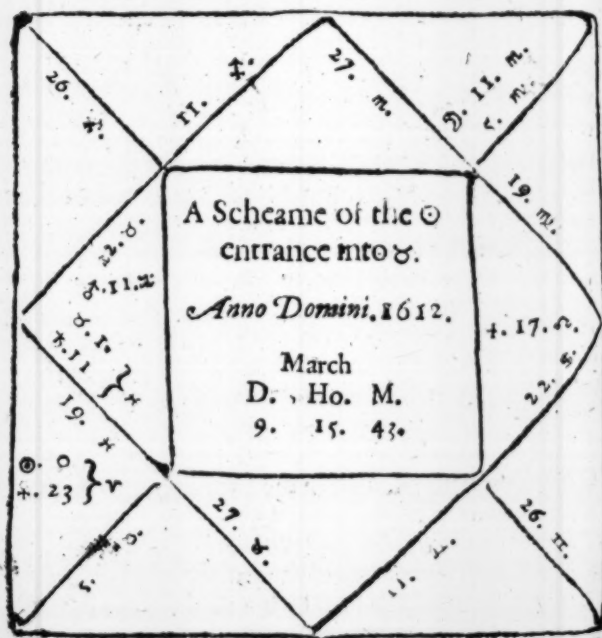

**W**inter vsually accounted the last quarter,  
began at such time as the Sunne entered  
the first minute of Capricorne, which was  
the last Moneth of the last yeere, on the  
12. day, at the 2. houre, 30. minutes in the  
morning: for the Sunne then in his least elevation &  
greatest digression South, made shortest day & longest  
night, &c. This Quarters proper condition is immo-  
derately cold and moist, in which I doubt not but it  
will expresse his wonted kinde in the highest degree, &  
more especially in January, about the 8. 9. or 10. dates,  
the 17. 18. or 19. dayes, the 27. 28. and 31. dayes. In  
februarye the 1. day, the 5. or the 6. the 9. 13. 14 15.  
16. 17. 18. 19. 20. 21. 22. and 23. dayes by boisterous  
windes, heapes of snow and some hard frosts, flete,  
hail and raine in very extraordinary sort.

### Of the Spring.

**S**OL now being seated in the very punct betweene  
the two limits of his greatest North and South de-  
clination, to wit, of the tropicks Cancer & Capricorne,  
maketh equall separation of day and night throughout  
the whole world. And shall by his then righter prole-  
ted rays, that is, at his entrance into the first minute

## A Prognostication.

of Aries, which shall be for this yeere (1612) the 10. day of March, at 43. minutes after 3. of the clocke in the morning, being our Wernell or Spring quarter, ordinarily accounted the second, but verily the first and revolution of the yeere. Whereof Mars is sole dominator, who marching within the continent of the Horoscope, and seconded with the malicious Machaue- lisme of Saturne and Mercurie his followers, or yet as unfortunate significations being insinuated by the particular configurations, habitudes and situations of the Planets and Signes in the Figure, portendeth certes strange and direfull effects, which I will not here inlist to particularize, but haue therefore delineed the celestiaall Schemme thereof, here following for the iudicious in this Serpence to peruse.

Rudstone. 1 6 1 2.

### Of Summer.

**T**his Quarter taketh his beginning at the entrance of the Sun into the first minue of Cancer, happening this yeere 1612. the 11. day of June, 31. minutes after 3. of the clocke in the morning. At which time hauing attained the vtermost bounds of his Boethzen declination, is at the highest with vs, then neereſt circling our Arcticke pole, and maketh with vs the greatest diuision and inequality of day & night, viz. the day 16. houres 34. minutes, and the night but seauen houres 26. minutes.

This season by his naturall inclination is extremely hot and dry, which I gather will not much degenerate from his kinde, except at his very entrance, as the 13. 14. 15. 16. 17. 18. and 19. dayes of this Month of June, and all his ending for the most part, as from the 2. of August and so forward, onely some hideous thunder-claps, fierce raging stormes and tremendous flashes of lightning, are like to happen to the husbandmans oft hinderance in reposing ops her fruits.

### Of Autumne.

**A**utumne, or Fall of the leafe being in common account the fourth and last quarter of the yeere, beginneth at such time as the Sun in the midst of his retire towards the South, inuadeth the first scruple of the other Equinoctiall Signe Libra, which shall fall out (for this yeere) the 12. day of September, at 53. minutes after 9. in the night, making againe in this yeere equall day and night throughout the whole world.

For the weather in this season it is like to be for the most part, of a more then vsually kinde and temperate dispose. Notwithstanding certaine powerfull aspects of the tempestuous Planets happening about these hereafter noted dayes, are like to enterſperſe their

## A Prognostication:

turbulent effects: as first, in September about the 17. 18. 19. 20. dayes. In October, the 10. 11. 12. 13. 14. and 22. dayes. In November the 23. 28. and 30. dayes. In December, the 1. 4. 5. 6. 7. 8. 9. 10. 11. and 12. dayes.

### Of the Eclipses.

**T**here shall be this yere two Eclipses visible in our Horizon.

The first is of the Moone, happening the 4. of May, at 35. minutes after 9. of the clocke in the night, and shall be eclipsed to the quantitie of 7. points, 22. minutes, which is neere the third part of her whole body, and by the space almost of thre houres, for shee shall first beginne to enter the shade of Earths darke Globe, at 7. minutes after 8. of the clock, increasing more and more in obscuracion untill 35. minutes after 9. of the clocke, after which time by degrees decreasing shall at 3. minutes after a 11. be quite unmasked and restored to her borrowed light.

In like manner the Sunne also on the 20. day of the Moneth of May, at 37. minutes after 10. of the clocke in the morning, shall suffer an eclipsation of losse of light, to the quantitie of eight points 38. min. being two third parts of his body. And the whole continuance thereof, from the beginning to the ending shall be 2. houres and 21. minutes.

The effects of both which Eclipses doe take place about the beginning of September, whereof the Moones shall end with this yere, howbeit the Sunne continues almost two yeres after.

By which certaine euents are presigified, which although I cannot here conueniently stand vpon in particulars to dilate, are notwithstanding rather like lie to be more direfull and vnfortunate, then luckie or auspicious.

An Exposition of certaine Tables and  
brieue notes hereafter following.

**T**he houre and minute of the risings and settings of the Planets and the parts of heauen they appeare in at Sun rise and set. And also Tables on the right hand thereto adtopping, shewing the houres and minutes of the rising, comming to the South, and setting of the fixed Stars, for the first day of every Moneth. But if you would know the same for any day of the Moneth following, you are to subtract iij. minutes for every day, or an houre for every xv. dayes, from the houres and minutes found in the Table, and you shall haue your desire without any sensible error.

Whose vse is this, knowing the houre of the night and the North point, and so looking directly South you shall learne to know the starres, or knowing the Starres and the North, you may know the houre, and by knowing the houre and starre, you may learne the true North, with many other excellent vses, which Marriners may make vse of. Thus much for the explication of these Tables.

And now for the more easie vnderstanding of the abridged notes at the foote of every moneth set downe for the rising and setting of the Planets with all the most notable fixed starres, are thus vnderstood. First, is a figure denoting the day that such risings or settings happen, then two letters shewing the sorts of the risings or settings thus: M. R. signifying a Morning rising: E. S. an Evening setting: M. S. a Morning setting and E. R. signifying an Evening rising. But what these risings and settings are, by the way I will expresse in these notes following.

## A Prognostication.

**I** morning { When a Planet riseth with a Star precisely in the East part of the Horizon.

**I** evening { When a Planet setteth with a Star precisely in the West part of the Horizon.

**I** morning { When a Planet rising, a Star setteth in the West part of the Horizon.

**I** evening { When a Planet setteth, a Star riseth in the East part of the Horizon.

Howbeit in stead of the names of the Stars I have set downe figures, which together with the help of this Table following will direct you to the name of the Starre.

### The Table shewing the Names of the Starres, and their Numbers.

- 1 **T**he belly of the Whale.
- 2 **T**he big. Starres on the backe of the Bull.
- 3 **T**he South eye of the Bull.
- 4 **T**he left foote of Orion.
- 5 **T**he left shoulder of Orion.
- 6 **T**he first star of the Belt or Girdle of Orion.
- 7 **T**he right shoulder of Orion.
- 8 **T**he mouth of the great dogge.
- 9 **T**he head of Castor or Appollo the fayrest.
- 10 **T**he head called Hercules, the latter of the Twin.
- 11 **T**he lesser Dogge.
- 12 **T**he bright Saire of Hydra.
- 13 **T**he middlemost of the three stars in the necke of the Lion.
- 14 **T**he hart of the Lion.
- 15 **T**he backe of the Lion.
- 16 **T**he taile of the Lion.

- 17 The eare of Coyne in the left hand of the Virgin.
- 18 A Starre betwixt the legs of Boetes.
- 19 The bright Star of the Crowne.
- 20 The bright Starre of the South Ballance.
- 21 The bright Starre of the North Ballance.
- 22 The hart of the Scorpion.
- 23 The Eagle or flying Walter, the letter of them.
- 24 The mouth of the South fish, & end of the water of Aquarius.

As for example, the 8. day of January Mars hath a morning setting with the lesser Dog, thus noted 8, & M. S. 11, being vnder stood thus. The figure 8, sheweth the day of the Month, M. S. a Morning setting, with the figures of 11. topped thereto, which standeth in stead of the name of the Star, shewing the day the number thereof: for in the former Table finding the figures of 11. on the left side thereof directly there against is set downe, The lesser Dogge, which is the name of the Starre that hath a Morning setting to Mars, and known by the figures of 11, &c. The like you are to vnderstand in the Tables of the Risings, commings to South, and settings of the fixed Starres and their aspects, with and to the Planets: for instead of their names I haue set downe their numbers, as you may perceiue by this Example, and the former Table, where euery Stars name hath his pecular figure set before him.

Ianuarie.

# A Prognostication.

Januarie.

**SATVRNE** is our evening star, appearing South-west at Sunne setting, setteth. 48. minutes after 7. at night.

Jupiter riseth first at 7. in the night.

Mars is our morning starre, rising at 2. min. after 6. in the

morning, and may be seene South-East at Sunne rising.

Venus and Mercury are combust.

		Expulsive.			s m n.

## Naturall causes, and first, of the three Regions of the Ayre.

**T**he Ayre is distinguished into three Regions, which are thus described.

The first & the highest Region is a part of the aire contained within such a space as the heat of the Dybes motions, and the elementall fire maketh their impressi-  
 on in the Ayre.

The second and middle Region is a part of the ayre comprised in such distance, as is betwene the end or precinct of the former impression, and the bittermost part of the Sunnes reflection.

The third and lowest Region is a part of the ayre comprehended in such a distance & space as the beames of the Sunne maketh their reflection in.

The highest and lowest Regions are hot, and the middlemost cold.

## Husbandly Elections.

**S**Et, graffe and plant, the y being in v m h and x,  
 when he is in a good aspect with z and y.

Solu

## A Prognostication.

Now, when the ☽ is in ♌ or ♍ and ☿ a little before or after the change, yet for a dry ground the best time is thought to be about the full. The happy aspect of ♌ and ♍ furthereth tillage greatly.

Cut timber from Midsummer to Christmaste the ☽ increasing in aspect with ♌.

Cut Vines in February or March, the ☽ being in ♌ or ♍.

Gather hearbes, flowers, and fruits, the ☽ at the full.

Remoue plants in November, the ☽ being in her last quarter.

Cut hay, the Moone in ♌ or ♍, the ☽ increasing in good aspect of ♌ or ♍.

Sheare sheepe, the Moone increasing.

Gethe or libbe cattell, the ☽ in ♌ or ♍.

Kill Swine, neere the full.

## FINIS.
